DC-13T Clock (Standalone)

This unit requires 120Volt AC for operation.

When the clock is first connected to power it will set itself to 12:00. Minute-Hour switches are installed on the side for convenient time setting.

The battery backup is a 9 Volt Nickel Metal Hydride rechargeable. The battery needs to be installed into the battery mount, also on the side, after power up.

After 24 hrs. of continuous running the battery will accommodate 4 hrs. of backup power after power failure.

Thank you for purchasing DC-Digital clocks.

Sincerely,

Jim Staffan
DC-Digital Engineering

We Give you the Time!
