DC-406S Clock (Standalone)

This unit is connected to a 15Volt DC power supply that requires 120Volt AC for operation.

When the clock is first plugged into power it will set itself to 12:00 a.m.. Fast-Slow switches are installed on top for convenient time setting.

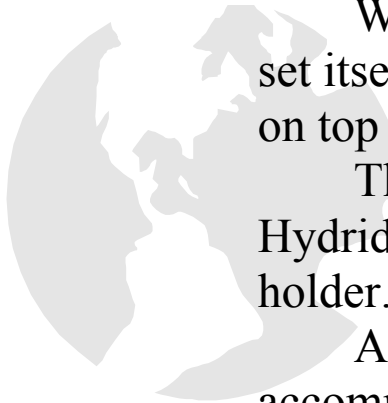

The battery backup is a 9 Volt Nickel Metal Hydride rechargeable. Install the battery into the side holder.

After 24 hrs. of continuous running the battery will accommodate 4 hrs. of backup power after power failure.

Thank you for purchasing DC-Digital clocks.

Sincerely,

Jim Staffan
DC-Digital Engineering

We Give you the Time!
